```python
from flask import Flask, jsonify
from transformers import import pipeline

app = Flask(__name__)

# Load a pretrained chatbot model (Hugging Face DialoGPT)
chatbot = pipeline("text-generation", model="microsoft/DialoGPT-medium")

# Keep conversation context
conversation_history = []

@app.route("/chat", methods=["POST"])
def chat():
    user_input = request.json.get("message")
    if not user_input:
        return jsonify({"error": "Message is required"}), 400

    # Add user input to conversation history
```
